- Black Ink Imprint
- Available in Georgia Only

See back for standard security features

CUSTOM RX PADS

- 5-7 Day Delivery
- 1-7 Color Printing
- Padding
- Booking
- Multi-part
- Custom Sizes

Wise offers both stock and custom prescription pads. Our stock prescription pads have ten security features and exceed the requirements mandated by the Centers for Medicare and Medicaid Services (CMS). To be considered tamper-resistant, a prescription pad must have at least one security feature of each characteristic below:

- One or more industry-recognized features designed to prevent unauthorized copying of a completed or blank prescription form.
- One or more industry-recognized feature designed to prevent the erasure or modification of information written on the prescription by the prescriber.
- One or more industry-recognized feature designed to prevent the use of counterfeit prescription forms.

All states are required to meet the baseline standards set forth by the CMS. Several states have Prescription Monitoring Programs that require prescription pads to have specific security features. For in-depth information regarding specific state requirements go to wbf.com.

Providers Affected

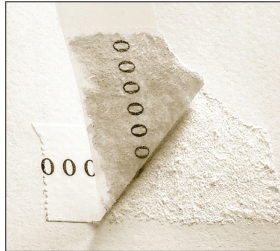

- All physicians, practitioners, and other providers who prescribe Medicaid outpatient drugs, including over-the-counter drugs, in states that reimburse for prescriptions.
- Pharmacists and pharmacy staff especially should be aware of this requirement as it may affect reimbursement for prescriptions.
- Applicable regardless of whether Medicaid is the primary or secondary payer of prescriptions being filled.
- Many states require all prescriptions for controlled substances to be written on tamper-resistant paper whether for a Medicaid patient or not.

Prescription Pads

SECURITY FEATURES

As experts in the field of document security, we are your source for secure prescription pads.

Bleach and Oxidizer Reactivity
Polar Class Solvent Reactivity
Non-polar Class Solvent Reactivity
Acid Reactivity
Base Reactivity

PRIMARY INDICATOR STAINS

This measure protects against alteration by changing color when exposed to polar class solvent reactivity (approx 30 solvents). Providing easy recognizable signs of attempted alteration.

PRINTLOC® TONER ADHESION

Saturation treatment on both sides of paper prevents toner removal by scraping, tape or creasing.

INVISIBLE FLUORESCENT FIBERS

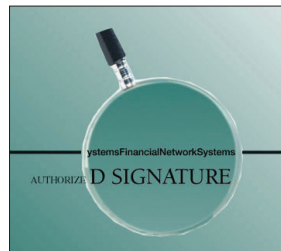

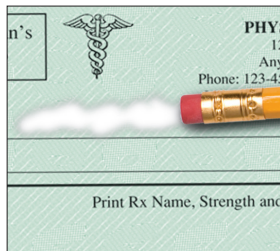

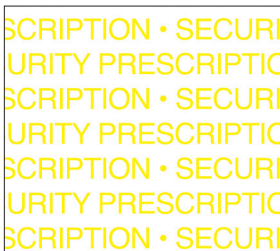

Visible only under UV light; help confirm a document's authenticity because they can't be photocopied or scanned.

HEAT SENSITIVE RX SYMBOL

The Rx symbol changes color when rubbed or heated.

SECURITY FEATURES LISTING ON BACK

Advises the recipient of the security features on the document. Allows the recipient to verify and reject it if the features do not match the listing.

ARTIFICIAL WATERMARK

This technique creates a subtle reflective pattern visible when viewed at different angles. The image can't be scanned or copied, or reproduced with digital printers.

VOID PANTOGRAPH

When an attempt to photocopy or scan is made, the "VOID" will show up on the copied or scanned check. This process is effective against most black and white and color copiers.

ERASABLE INK

Provides a clear visual indication if someone attempts to alter. If an attempt is made to alter the information by erasing it, the colored background disappears.

MICRO-PRINTING

Extremely small type (.010) is typically used in the signature line. It appears as a straight line to the naked eye but can be verified under magnification. When copied or scanned, the type becomes a solid line.

REVERSE RX

Rx Symbol drops out when photocopied to appear white.
