SECURITY PAPERS

Defensa® Basic With invisible fibers that can only be seen under UV light, plus chemical alteration indicators, Defensa® Basic provides a foundation for your security paper needs.

Defensa® SecurityGate® With an artificial printed watermark, Defensa® SecurityGate® adds an extra level of protection on top of the multiple security features present in the Defensa® Basic product. Customers may even create a custom watermark.

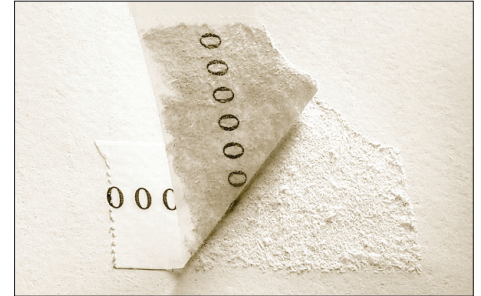

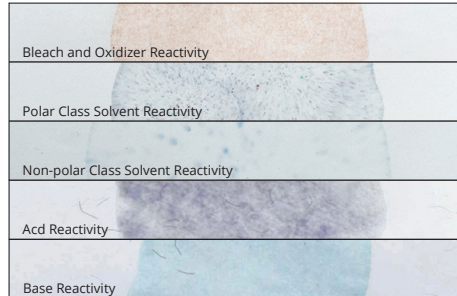

Defensa® True With a true Fourdrinier watermark, Defensa® True has all the features of basic, and the added protection of the true watermark. This is the grade that will meet your customer's needs and lead you to securing that consistent large volume business.

Defensa® Design With a true Fourdrinier watermark, Defensa® Design features several levels of security including a 2-bar pattern with bleachable ink embedded fibers and a multi-language invisible void feature. This product is manufactured in both white and colors to allow maximum flexibility for customer needs.

Defensa® Premium With the highest level of security available, Defensa® Premium provides multiple features such as a Fourdrinier watermark, full chemical reactivity, and both visible and invisible embedded fibers.

The Last Word in Document Security

IN PAPER SECURITY FEATURES

TRUE FOURDRINIER WATERMARKS

A true Fourdrinier watermark is a watermark that is pressed into the paper at the mill and is visible from either side when held to the light. This dual-tone watermark provides instant authenticity of the document and is virtually impossible to replicate, copy or scan.

PRIMARY INDICATOR STAINS

This measure protects against alteration by changing color when exposed to polar class solvent reactivity (approx 30 solvents). Providing easy recognizable signs of attempted alteration.

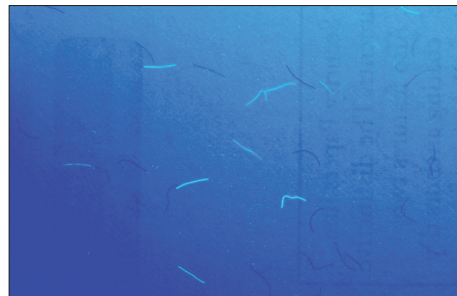

PRINTLOC® TONER ADHESION

Saturation treatment on both sides of paper prevents toner removal by scraping, tape or creasing.

VISIBLE EMBEDDED FIBERS

Visible fibers are added to the paper when it is manufactured. They are placed randomly on the paper, on both the front and back side and can be different colors, densities and lengths. The fibers can be seen without the use of special equipment to ensure authenticity.

INVISIBLE EMBEDDED FIBERS

Yellow or blue fluorescent fibers are embedded in the sheet and are visible only when the sheet is exposed to a black light.
